+55 (83) 99106-7863 • lmsa.moreira@gmail.com • github.com/lucasmsa • linkedin.com/in/lucasmsa

Product engineer with five years building products end to end, most recently a senior care app taken from its first commit to the AI features running in it.

Experience

Product Engineer

Mexico City (remote)

Koltin

Aug 2025 — Present

- Built the mobile app from scratch in React Native and Expo, and have been behind every release of it.
- Shipped an OpenAI support-ticket classifier that routes by reason in production, scored daily against human experts. **Over 90% accuracy.**
- Took a WhatsApp integration on the Meta Business API from investigation and ADR through production rollout. **Account-activation tickets down 63% in 3 weeks.**
- Built voice entry for the health and habits section of the medical record, so a member can speak those answers instead of typing them on a phone, and photo capture that reads a medicine box's name, presentation and concentration.

Software Engineer

Dallas, Texas (remote)

TapGoods

Jul 2023 — Jul 2025

- Replaced Create React App, Webpack and Babel with Vite and SWC, and dropped 80+ stale dependencies. **Boot time down 80%, production builds down 60%.**
- Migrated the front-end to TypeScript and untangled deeply coupled modules, deleting 5,700+ lines of JavaScript and removing 1,500+ circular dependencies.
- Wrote 2,000+ RSpec tests across features in a mature Rails codebase, about 10% of all test additions.
- Shipped critical production hotfixes in under an hour with Datadog and Airbrake, and acted as the team's front-end reference in reviews and architecture.

Software Engineer

Brasília, Brazil

Ília

Jan 2022 — May 2023

- Built screens and features on the Mirae platform in Next.js, backed by Strapi as a headless CMS.
- Shipped features for the Livelio Marketplace mobile app, with Storybook and Atomic Design as the component system.
- Delivered a port and vessel management app with offline-persisted sessions via redux-persist, i18n, and Firebase dynamic links and cloud messaging.

Software Engineer Intern

João Pessoa, Brazil

Digivox

Jan 2021 — Jun 2021

- Built a ZeroMQ microservice backend with NLP.js for intent extraction and Danfo.js for structured data.
- Automated scheduled website tasks with Puppeteer.

Software Engineering Scholar

João Pessoa, Brazil

LAVID

Jan 2020 — Dec 2020

- Cleaned and augmented large datasets in Python for deep-learning training on a Portuguese to Libras translator.
- Contributed to Vlibras-Console for model training and testing, with results published in SEMISH 2021.

Projects

coast-to-cup

github.com/lucasmsa/coast-to-cup

Which 2026 World Cup group draws the worst logistics, modelling travel, circadian shift, altitude and heat against a base camp. React Three Fiber, Python, Go

hiit-maker

github.com/lucasmsa/hiit-maker

Interval training builder rebuilt on Vite and React 19, installable and usable offline. React 19, Vite, Zustand, Playwright

Arkham Theme

github.com/lucasmsa/arkham-theme

Dark VS Code theme, 24,000+ installs on the marketplace. VS Code

vscodethemes-scrapper

github.com/lucasmsa/vscodethemes-scrapper

Scrapes theme screenshots across seven languages behind bot detection and partitions them into S3, as the collection stage feeding a theme classifier. TypeScript, Puppeteer, AWS S3, Jest

Education

Federal University of Paraíba (UFPB)

GPA 8.29 / 10

B.S. Computer Engineering

Aug 2017 — Jun 2023

Additional
